

1. Ethereum Accounts

Downloading and installing Metamask wallet from <https://metamask.io/>

Then go to download now

To download and install the Ethereum browser extension, you need to click on the "Install Metamask for Chrome" button. For Firefox browser you will see "Install Metamask for Firefox". Then allow the browser to install this application.

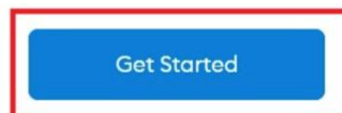

Then you will be taken to the menu for installing extensions for the browser with the selected Metamask application.

Welcome to MetaMask

Connecting you to Ethereum and the Decentralized Web.

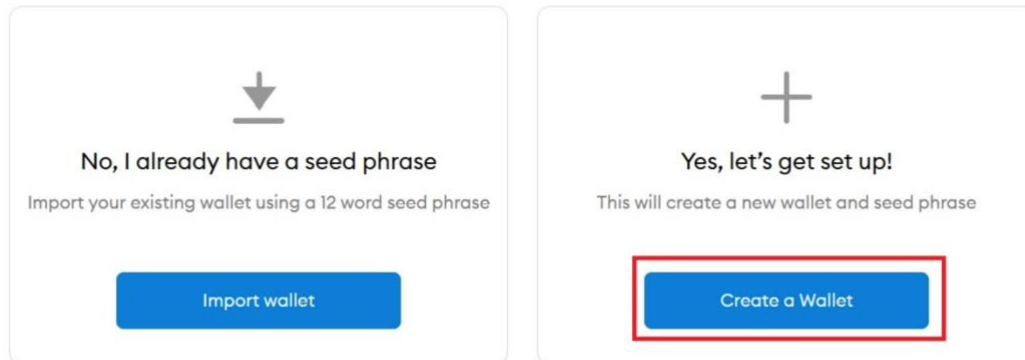

We're happy to see you.

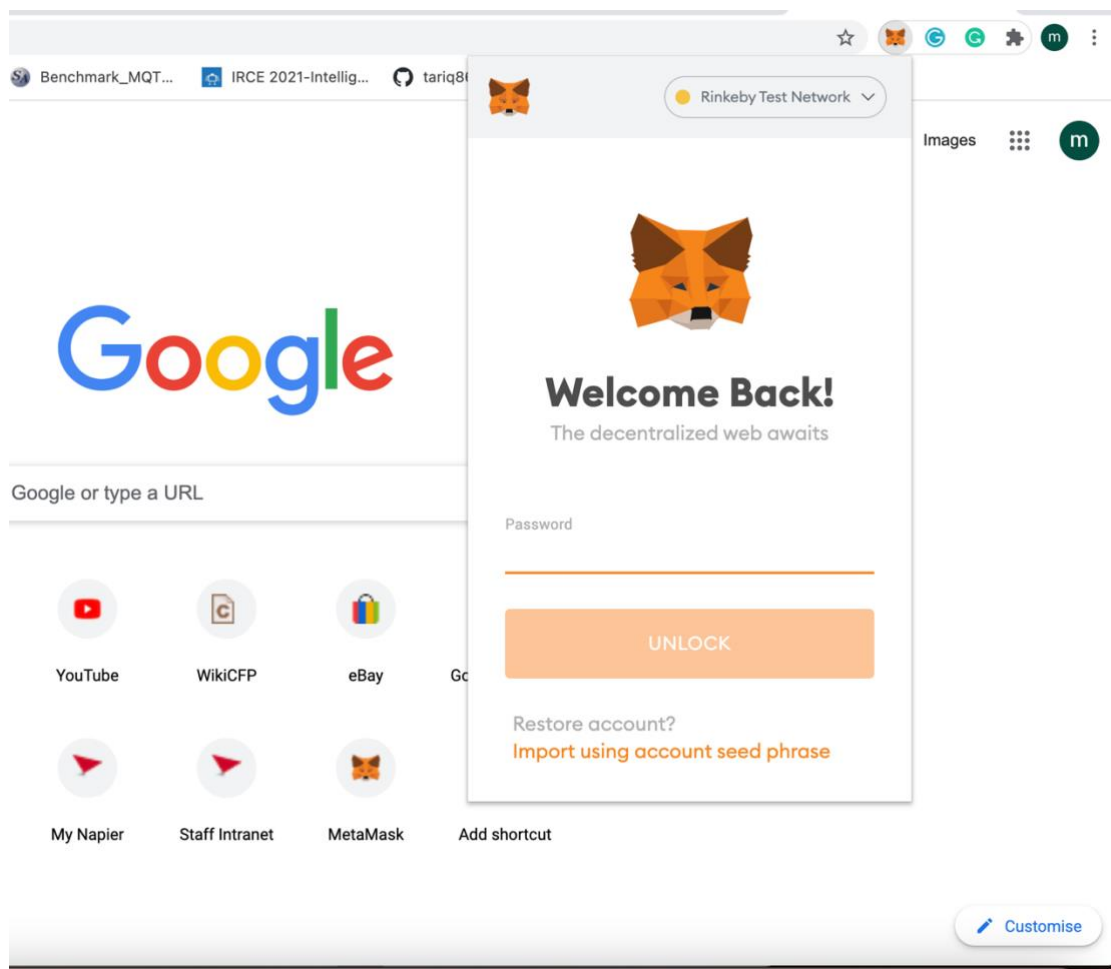

Then metamask Ethereum wallet initial configuration window will open

You can either import an existing wallet or create a new wallet. The Metamask wallet will then be installed as an application built into your browser.

New to MetaMask?

After installation is completed, the red fox icon will appear in your browser.

Now you have installed your first Ethereum wallet. So now you can create more than one account and you will have your public and private key stored securely in your wallet. After creating Ethereum accounts you will be able to interact with smart contract in Ethereum blockchain by signing transactions using your private key that stored in your Metamask wallet.
